

Pressure log
1/min, 0.01 step

Segment at refills
280 descents

Algorithm 1: the estimator

Curvature screen
 $c \geq 0.45$, 239 kept

Profiled least squares
per-cycle $\hat{r}_b$, $\hat{k}$

Algorithm 2
degeneracy

How much is
the estimator?

Algorithm 3
physics-only

Could physics
alone do it?

Calibrated r_b
0.0126 [0.0112, 0.0142]

Further checks: endpoint trimming,
ORP terciles, classifier two-sample test
